BIODEGRADABLE DUST SUPPRESSION FOAMING DUST CONTROL AGENT

-  Reduces dust at application point and downstream
-  Expands water up to 100 times
-  Low surface tension allows a microfilm to keep dust particles wet longer
-  Extends surrounding equipment life
-  Excellent low-temperature characteristics
-  Requires approximately two litres of BDS per hour

POLO BDS was developed to combat and prevent dust by expanding water, specifically for applications where excessive water can lead to other problems.

POLO BDS creates micro-bubbles, which are then applied to areas of the dust generation to combat dust in an efficient and rapid manner.

POLO BDS has a problem free application system. The **Polo Foamer** is simple to operate once professionally installed; maintenance required is generally performed by Polo Citrus Australia.

POLO BDS is readily biodegradable to AS 4351.
