

DUST-CON

DUST CONTROL AGENT

-  **Readily Biodegradable to AS 4351.2**
-  **Phosphate Free**

Polo Dust-Con is a concentrated, citrus-based product formulated to control dust generated by soil, coal, limestone and other materials.

Polo Dust-Con is particularly suited for use as the dust control agent in underground mines. Use of **Polo Dust-Con** typically removes around 50% more respirable dust than water alone. **Polo Dust-Con** improves the wetting ability of water, resulting in fast knockdown of fugitive particles and reduction in droplet size compared to raw water. This reduction in droplet size represents greater surface area for attraction of particulate matter, especially fines.

Polo Dust-Con also imparts a descaling effect in piping and spray systems, ensuring reduction and prevention of deposits and associated maintenance costs.

Advantages

-  Reduction in water requirements
-  Will not corrode equipment – pH neutral
-  Compatible with most industrial seal materials
-  Easy to apply by regular water spray equipment or proportional dosing system
-  Pleasant citrus fragrance masks sulfurous odours
-  Very economical

Directions for use

Polo Citrus can advise the appropriate dilution rate for your application.

Proportional dosing systems are available from Polo Citrus Australia Pty Ltd.
