

NFW DUST-CON

NON-FOAMING DUST CONTROL CONCENTRATE

-  **Readily Biodegradable to AS 4351.2**
-  **Phosphate Free**

Polo NFW Dust-Con is a non-foaming dust control agent, developed for applications where dust poses health, safety and environmental risks. **Polo NFW Dust-Con** is used to control and reduce airborne dust in underground and on-surface industrial applications, utilising minimal water.

The surface tension reduction of water induced by **Polo NFW Dust-Con** enables extremely quick wetting of fugitive dust particles. This in turn facilitates control of these particles, which remain wetted for extended periods.

Regular application of **Polo NFW Dust-Con** at its working concentration of one part to 5000-6000 parts water affords excellent restriction of atmospheric dust, while generating no foam and reducing water consumption.

Advantages

-  Reduces water requirements
-  Reduces application frequency
-  Reduces dust pollution
-  Will not corrode equipment – pH neutral
-  Very economical
-  Compatible with most industrial seal materials

Directions for use:

Polo Citrus can advise the appropriate dilution rate for your application.
